

RHINOPLASTY INFORMATION

PRIOR TO YOUR RHINOPLASTY PROCEDURE

- Prior to your procedure, you will have your “Pre Op” visit with Dr. Papalian generally 2 weeks before to your surgery.
- At that time, your medical condition will be reviewed and any preoperative testing evaluated.
- You will be given clear information on what to expect before, during and after surgery.
- You will be provided with a prescription for your postoperative medications and it is recommended that you have the prescriptions filled at your local pharmacy and ready at home prior to your surgery
- Smoking before surgery will always increase your risk, however it is imperative that you refrain from smoking for 6 weeks prior to your procedure.
- Avoidance of Aspirin and Aspirin containing products is strictly prohibited for 14 days before surgery.
- It is recommended that you avoid alcohol for 48 hours pre operatively.
- “Herbal remedies” and “herbal supplements” are to be avoided for 14 days preoperatively.
- You will be given instructions by Dr. Papalian, on which of your prescription medications you should continue to take before your surgery at the time of your Pre-Op visit.
- Nausea after surgery is not an uncommon finding. Dr Papalian finds that if you eat a light, low residue, low volume diet for the entire day prior to surgery, patients often have fewer issues with nausea.
- Hydration however is important. Drink plenty of water.
- The night prior to surgery, **after midnight**, it is important that you DO NOT EAT OR DRINK ANYTHING, including water.
- You will need to ensure that you have proper help at home for after surgery. It is always recommended that you have someone with you for the first night after surgery.
- You will need to arrange for your transportation to and from the facility and for your first postoperative visit, as it is recommended that you not drive to the first visit.
- Surgery, while anxiety provoking, should be a controlled fulfilling experience. You will be provided with all the information needed to ensure you are prepared and “ready” for your procedure.
- Dr Papalian will guide you “each step of the way” and ensure that you are comfortable with your progress

- You should ask questions and feel free to contact the office if you need any information.

YOUR RHINOPLASTY SURGERY DAY

- **After midnight** the night before surgery, it is important that you **DO NOT TO EAT OR DRINK** anything, including water.
- It is best to wear clothes that are easy to slip on. A top that is either a front zipper or button is recommended
- Your procedure will be performed as an **outpatient** at the **Plastic Surgery Center in Palo Alto**.
- Your procedure will be performed under **General Anesthesia**. The anesthesia providers are physician anesthesiologists, not nurses, who will personally and continuously attend to you, for your ultimate safety.
- After your procedure, you will spend time recovering in the facility. There is no defined time for discharge. The facility staff will ensure that you are ready to go home before you are discharged.
- You will need transportation home from the facility.
- After surgery you may resume your routine prescription medications.
- At home, keep your head comfortably elevated with pillows. Avoid bending over.
- You will be discharged with a nasal splint in place that cannot get wet for 7 days following surgery.
- You will be discharged with “nasal packs” in place, which will require you to “breathe through your mouth” for the first night.
- You will use “nasal drip pads”, which will be provided to you, to place under your nose to collect any drainage the first night.
- When it is time for sleep, get your rest with your head elevated on pillows.

RECOVERY FOLLOWING RHINOPLASTY

- Recovery from Rhinoplasty is typically rapid.
- Discomfort following surgery is commonly minimal and most often described as “soreness or head ache.” The discomfort is often alleviated with Tylenol, although pain medication is prescribed for your use if needed.
- You may shower and wash your hair the day following surgery after being seen in the office, however, you will need to protect your nasal splint from getting wet in the shower.

- Swelling and bruising will typically peak on Day 3 after surgery and then begin to resolve. Bruising usually resolves in 7 days.
- You will be seen on the first postoperative day in the office to ensure your healing. Your nasal packs will be removed the first post-operative day in the office.
- Patients return to the office on the 7th post-operative day to remove the nasal splint. You may then wash your entire face in the shower.
- Most patients return to work in 7 days.
- Important social engagements are best delayed for 2 weeks post operatively.
- Regular exercise can be resumed in 14 days.
- While the majority of the swelling will resolve in weeks, you will continue to see improvement in your nose for months after surgery.
